Hi there, I'm Kamil,

I do Front-End and Back-End, with some occasional Uix Design. I'm also terrible at playing guitar and singing at the same time, but quite good at road cycling. Oh, I once hitchhiked to China, but I like more casual way of traveling nowadays.

Together with my friend (Piotrek Frącek, https://www.linkedin.com/in/piotrekfracek/), we are working as InventiStudio, providing Vue.js and Node.js web development services. We are available for hire on B2B basis. Interested in more details of how our potential cooperation might look like? Keep on reading!

Skills

FRONT-END

`HTML5` `CSS3` `Sass` `JavaScript (ES6+)` `Vue.js` `React.js` `Redux` `Webpack`

BACK-END

`Node.js` `Express` `Koa` `SQL` `NoSQL` `PostgreSQL` `MongoDB` `REST API`

DEV-OPS

`Docker` `NGINX`

OTHER

`Unit & E2E Testing` `UI & UX design` `Sketch` `Photoshop` `Agile`

Education & Experience

2011 - 2015 **Wrocław University of Technology**
Bachelor's degree

Front-End Developer **2015 - 2017**
Monterail (remote)

2016 **Merck** 🇩🇪

Merck combines world class strengths in pharmaceuticals and life sciences to develop innovative and sustainable healthcare solutions designed to address Africa's most critical health challenges. At Merck Diabetes and Merck Fertility my task was to rewrite old, heavy Angular 1.x apps, using (relatively new at this point) Vue.js. Rails Back-End didn't provide any API, these were old fashioned "full reload" sites, so we've used Vue.js more like jQuery, than Single Page App solution. Biggest challenge of it all was an Opera Mini support, as it's the most popular browser across Africa.

🇬🇧 **King & McGaw** **2017**

King & McGaw is the UK Art Print, Poster & Canvas manufacturer and distributor. The challenge was to boost performance of old, heavy Backbone app, by using Vue.js in the most crucial parts. Rails Back-End didn't provide any API, hence Vue.js had to operate on the data that was with already rendered site.

2017 **Tailored.to** 🇬🇧

Tailored was a platform that guides you to a perfectly matched product for your needs in under 60 seconds. No technical or specialist. I was solely responsible for implementation of React.js Front-End app. The biggest challenge lay in managing a lots of data coming from API, so a proper structure of Redux store was the key.

Co-Founder & JavaScript Developer **2017 - now**
InventiStudio

2017 - now **SmokeFree** 🇦🇹

Smokefree is a nascent service that aims to easily find places (i.e restaurants, pubs, cafes) free of tobacco smoke. Initially, the application will operate on the Austrian market, focusing on Vienna. Our task is to implement the Vue.js Front-End part of this application.

🇵🇱 **ZapytajCoacha** **2017**

Project we've made for coach Marzena Peplińska. The goal was to create custom booking management system and admin panel for writing blog posts. We have designed and developed three applications - Vue.js marketing website, Vue.js admin panel and Node.js Back-End API.

Promis 🇫🇷

2018

Promis is a project we've made for French insurtech platform. The goal was to design and develop a Vue.js Front-End of insurtech platform.

2018 - now

Leanfocus 🇩🇪

Leanfocus is an application for lean management of factories' structures and machines. It allows viewing the status of individual machines, displaying statements, statistics, order processing and supervising work in real time. In addition, the application has a terminal view that runs on tablets located on the production line. Thanks to this, people responsible for production can manage orders on an ongoing basis. It is the biggest and most complex application we've done to this date. We are responsible for Vue.js Front-End app (management and terminal), Node.js & MongoDB Back-End API and Node.js processing apps.

https://leanfocus.de/

🇺🇸 Curaytor

2018

Curaytor provides the technology, coaching and strategies needed to help great businesses grow with better marketing. We re-implemented a couple of sites using Vue.js.

2018 - now

XEOS 🇵🇱

XEOS is a joint venture between Lufthansa Technik and GE Aviation - two world leaders in the aviation industry, who have joined forces to create the most modern aircraft engine service center in the world. We are working on various landing pages support, and planning to create intranet together.

Your project

We prefer to work 100% remotely, however, if you're based somewhere near Wrocław, then we can definitely visit your office from time to time!

We don't expect you to hire both of us at the same time, as we might have some other projects going on, hence we'd first like to inform you on our availability, so you can then decide what kind of FTE you're interested in.

We are not software house (yet!), we're just a two guys getting things done!

We are billing our clients on hourly basis, meaning you're only paying for the time we've spent on the project, unlike on Employment Contract.
